Canadian Data Report Of Hydrography and Ocean Sciences

Data reports provide a medium for the documentation and dissemination of data in a form directly useable by the scientific and engineering communities. Generally, the reports contain raw and/or analyzed data but will not contain interpretations of the data. Such compilations commonly will have been prepared in support of work related to the programs and interests of the Ocean Science and Surveys (OSS) sector of the Department of Fisheries and Oceans.

Data reports are not intended for general distribution and the contents must not be referred to in other publications without prior written authorization from the issuing establishment. The correct citation appears above the abstract of each report. Data reports are abstracted in *Aquatic Sciences and Fisheries Abstracts* and indexed in the Department's annual index to scientific and technical publications.

Data reports are produced regionally but are numbered nationally. Requests for individual reports will be filled by the issuing establishment listed on the front cover and title page. Out of stock reports will be supplied for a fee by commercial agents.

Regional and headquarters establishments of Ocean Science and Surveys ceased publication of their various report series as of December 1981. A complete listing of these publications is published in the *Canadian Journal of Fisheries and Aquatic Sciences*, Volume 39: Index to Publications 1982. The current series, which begins with report number 1, was initiated in January 1982.

Rapport statistique canadien sur Hydrographie et les sciences océaniques

Les rapports statistiques servent de véhicule pour la compilation et la diffusion des données sous une forme directement utilisable par les scientifiques et les techniciens. En général, les rapports contiennent des données brutes ou analysées, mais ne fournissent pas d'interprétation des données. Ces compilations sont préparées le plus souvent à l'appui de travaux liés aux programmes et intérêts du service des Sciences et levés océaniques (SLO) du ministère des Pêches et des Océans.

Les rapports statistiques ne sont pas destinés à une vaste distribution et leur contenu ne doit pas être mentionné dans une publication sans une autorisation écrite préalable de l'établissement auteur. Le titre exact paraît au-dessus du résumé de chaque rapport. Les rapports statistiques sont résumés dans la revue *Résumés des sciences halieutiques et aquatiques*, et ils sont classés dans l'index annuel des publications scientifiques et techniques du Ministère.

Les rapports statistiques sont produits à l'échelon régional, mais numérotés à l'échelon national. Les demandes de rapports seront satisfaites par l'établissement auteur dont le nom figure sur la couverture et la page du titre. Les rapports épuisés sont fournis contre rétribution par des agents commerciaux.

Les établissements des Sciences et levés océaniques dans les régions et à l'administration centrale ont cessé de publier leurs diverses séries de rapports en décembre 1981. Une liste complète de ces publications figure dans le volume 39, Index des publications 1982, du *Journal canadien des sciences halieutiques et aquatiques*. La série actuelle a commencé avec la publication du rapport numéro 1 en janvier 1982.

ABSTRACT

Gregory, D.N., E. Verge, D. Dobson, and C. Smith. 1988. Long-Term Temperature Monitoring Program 1987: Scotia-Fundy, Gulf of St. Lawrence and Newfoundland. Can. Data Rep. Hydrogr. Ocean Sci. No.65: vii + 497 pp.

Daily mean sea temperatures and time-series plots of the temperatures measured at various depths in the Scotia-Fundy, Gulf of St. Lawrence and Newfoundland areas and recovered in 1987 are presented together with degree day calculations.

RÉSUMÉ

Gregory, D.N., E. Verge, D. Dobson, and C. Smith. 1988. Long-Term Temperature Monitoring Program 1987: Scotia-Fundy, Gulf of St. Lawrence and Newfoundland. Can. Data Rep. Hydrogr. Ocean Sci. No. 65: vii + 497 pp.

On présente les moyennes quotidiennes de la température de l'eau de mer et des graphiques des températures mesurées à diverses profondeurs en fonction du temps (séries chronologiques) pour les régions de Scotia-Fundy, du golfe du Saint-Laurent et de Terre-Neuve. Les données ont été recueillies en 1987. On présente également les calculs des degrés-jours.

INTRODUCTION

Temperature data from coastal areas have been collected extensively from Newfoundland region since 1967 and Scotia-Fundy and Gulf of St. Lawrence since 1978. The program, referred to as the Long Term Temperature Monitoring Program, is conducted mainly in support of various fisheries programs as well as to monitor any long term changes in temperature. Instrument calibration, maintenance, distribution, data analysis and publication is carried out primarily at the Bedford Institute of Oceanography. Previous reports in this series are listed in the bibliography.

The calibrated digitized analogue charts from the Ryan recorders are incorporated into the Atlantic Oceanographic Laboratory data archive. The data are available to any individual upon request from the Data Management Section of Physical and Chemical Sciences at BIO.

INSTRUMENTATION

The Ryan Thermograph Model J is the primary instrument for the Long-Term Temperature Monitoring Program. The instruments are purchased, sent for calibration and distributed for mooring by Mr. D. Dobson at Bedford Institute of Oceanography. When an instrument is returned the analogue record is removed, start and stop time of data annotated and then forwarded for processing. At regular intervals each thermograph is routed through the BIO Standards Laboratory for calibration checks to maintain data integrity. Should maintenance of the thermograph be required the instrument is sent to the local repair facility in Kentville, Nova Scotia.

Another instrument which was tested this year is the Ryan TempMentor, a small digital recording thermograph, which can record up to 6361 temperature readings at sampling intervals from 1 second to 2 hours. Manufacturers quoted resolution is 0.1 Deg.C. and an accuracy of 0.3 Deg.C. The TempMentor was deployed 3 times in Newfoundland and 4 times in the Gulf.

Various federal and provincial agencies and universities throughout Atlantic Canada are supplied with thermographs by BIO. The thermographs are started prior to delivery and then dispatched in a condition ready for immediate mooring upon receipt. The requirement that field attendants do not open the thermograph case has effectively reduced the instrument failure rate due to flooding.

A group of selected attendants throughout Scotia-Fundy and Gulf areas is contracted by Mr. Dobson. It is the responsibility of an attendant to moor the thermograph at a pre-selected site, inspect the mooring during the mooring period and recover the thermograph according to schedule. Mooring configurations are generally modified to meet local conditions. The thermographs are returned to BIO as soon as practicable after recovery has taken place.

Mr. P. Stead of St. John's, Newfoundland, administers the Long-Term Temperature Monitoring Program for the Newfoundland-Labrador area. He distributes the Ryan thermographs from the BIO pool to interested agencies for

mooring and, when recovery is complete, he returns the thermographs to BIO for servicing procedures and processing of data.

CALIBRATIONS

Calibrations of Ryan recorders are carried out in the Standards Laboratory at BIO under the guidance of Mr. J. Betlem.

The sensor of each thermograph is submerged in a Guildline Model 9734 constant temperature water bath of 40% ethylene glycol and water where it is subjected to a series of known stable temperatures. Each temperature is maintained for sufficient time to be recorded on the thermograph's analog chart.

Up to 8 thermographs can be calibrated at one time. The cover of the bath presses against the tops of the floating thermographs, exerting sufficient pressure to keep the sensors submerged and in a steady position.

The microprocessor bath control system provides constant cooling and proportionally controlled heat for any temperature setting, -10 Deg.C. to 75 Deg.C., far in excess of the Ryan thermograph range. Heaters and cooling coils are located in a special heat exchanger and circulation pump arrangement.

A controlled temperature is achieved in 10 to 15 minutes and will remain within ± 0.003 Deg.C. Temperature fluctuations away from the walls, bottom and surface of the water bath are less than 0.002 Deg.C.

When the thermographs are loaded, the bath is controlled at 20 Deg.C. for approximately two hours to allow for stabilization. Eighteen hours is generally required to cool from 20 Deg.C. to -2.0 Deg.C. The bath is then heated for two hours, with recordings of each thermograph taken at -2, 0, 10, and 20 Deg.C.

STATION DESIGNATIONS

To standardize the method of station identification the Unit Areas defined by the Department of Fisheries and Oceans have been adopted. A chart of these areas is shown in Fig. 1. The data in this report are organized by Unit Area and sequenced alpha/numerically.

Individual stations in each region are established in numerical sequence of data processing. Gulf of St. Lawrence deployments start with station number 100. Scotia-Fundy begins at station 400 and Newfoundland-Labrador with station 700.

DATA PRESENTATION

General

All data were digitized using a 36" digitizing tablet with a resolution of 0.001". Digitized values are averaged over a four hour sampling interval and interpolated to the mid-point of the sample.

Although present values are reported to the nearest 0.1 Deg C, the 0.5 Deg C accuracy maintained for previous reports still applies.

The report primarily contains data from instruments recovered in 1987, however, previously unreported data from prior years are also included.

Time Series Plots

The complete data sets are presented as time series plots on a scale of 4 month/plot. Both Julian and Gregorian dates are presented to facilitate analysis.

A station location map is also provided with each plot. The station location appears as a solid circle in the Unit Area indicated.

Some of the plots include comments when some irregularity was noted with the instrument. In most cases, the comments are intended to draw attention to a lack of confidence in the data, although the cause of the errors (or even if the data are in error) may not be known. In some cases where the calibrations were obviously wrong, no calibration was applied and so noted on the plot.

Monthly Degree Day Tables

Monthly degree calculations relative to 0°C are presented in Table 2. This table presents monthly calculations for time series, month and year contained in the report. No calculations are made for months containing less than 15 days data. Incomplete months with more than 15 days data are extrapolated to the full month. Note that the table is listed alphabetically.

Mean Daily Temperature

Mean daily temperature, 0 degree C and 4 degree C "degree-days" are listed adjacent to the corresponding temperature time-series plots. The "degree-days" are accumulative. Note that when a reading is less than the reference temperature, the accumulated degree days are not incremented.

Summary of Data Returns And Failures

	<u>S/F</u>	<u>Gulf</u>	<u>NF1d</u>
Deployments during 1987	67	109	105
Recovered with some data	21	58	73
